SKILLS

Git, Python, Docker, Linux, MongoDB, React, Node.js, MySQL, CSS3, Java, JavaScript, C#, Azure Service Bus, Apache Kafka, Redis, Shell Scripting, Azure CI/CD, HTML5, Next.js

WORK EXPERIENCE

Rodan Energy Solutions

Software Developer Co-op

Jan 2025 – May 2025

Mississauga, ON

- Developed and maintained enterprise software solutions using .NET Core, ASP.NET Web API, and C#, adhering to Agile methodologies and best practices. Actively participated in all phases of the Software Development Life Cycle (SDLC), including requirements gathering, solution design, implementation, testing, deployment, maintenance, and operations. Provided ongoing support and troubleshooting to ensure optimal application performance and reliability.
- Designed and implemented a client-facing Windows Service application that integrated Azure Service Bus with an RTAC Relay System, enabling real-time message dispatch using Modbus TCP and DNP3 protocols. Engineered a robust and scalable architecture to facilitate seamless communication between cloud-based messaging services and industrial control systems, improving system efficiency and reliability.
- Developed and managed CI/CD pipelines in Azure DevOps Server to streamline build, test, and deployment processes. Built automated release pipelines to enhance software delivery efficiency, ensuring continuous integration and deployment across multiple projects. Collaborated with cross-functional teams to conduct sprint planning, retrospectives, and code reviews, contributing to high-quality software releases. Provided ad hoc client support, including issue triage and resolution, to maintain seamless application functionality.

Titl

Front End Developer

Oct 2024 – Dec 2024

Waterloo, ON

- Designed and developed modern, responsive property and login pages using Next.js, ensuring seamless user experience and optimal performance. Leveraged React's component-based architecture to create reusable UI elements, improving maintainability and scalability. Implemented server-side rendering (SSR) and static site generation (SSG) for enhanced speed and SEO performance.
- Translated Figma designs into high-quality, pixel-perfect code, maintaining design consistency and accessibility across different screen sizes. Worked closely with designers and stakeholders to refine UI/UX elements, ensuring an intuitive and visually appealing user experience. Integrated Tailwind CSS for efficient styling and enhanced responsiveness, reducing development time while maintaining a clean and scalable codebase.

- Optimized authentication flows and security features for the login page, improving user authentication efficiency and data protection. Integrated third-party authentication providers using OAuth and JWT-based authentication to enhance security and usability. Conducted thorough testing and debugging to ensure seamless functionality, leveraging tools like Jest and React Testing Library for frontend testing.

Saxo Bank

Software Developer Intern

May 2024 – August 2024

Gurgaon, India

- Contributed to software development projects using C# and .NET architecture, including ASP.NET Core and .NET Core frameworks. Utilized Visual Studio for coding and debugging to ensure robust and scalable applications.
- Worked with Kafka for real-time data streaming, integrated Redis for caching, and leveraged Microsoft Azure for cloud services. Applied test-driven development (TDD) practices to ensure code quality and reliability.
- Participated in the full Software Development Life Cycle (SDLC), including designing and implementing ASP.NET Web APIs, working with Microsoft SQL Server, and employing Azure DevOps Server for continuous integration and delivery. Used OutSystems and microservices architecture to enhance application functionality and performance.

Dundas Life

Web Developer Intern

Jan 2023 – April 2023

Toronto, ON

- Contributed to web development projects by designing, coding, and deploying websites and web applications using GoHighLevel. Utilized various technologies to enhance functionality and user experience.
- Implemented artificial intelligence features and integrated Stripe for payment processing within Software as a Service (SaaS) platform. Leveraged ChatGPT to enhance user interaction and automate responses.
- Applied principles of user experience (UX) and user interface design to create intuitive and visually appealing web interfaces. Utilized tools like GoHighLevel to streamline and optimize design processes.

PROJECTS

Solo Narrative

Technologies: Next.js, React, CSS3 Developed Solo Narrative, a personal blog site using Next.js for server-side rendering and static site generation, ensuring optimal performance and SEO. The project features a modern, responsive design with CSS3, providing visually appealing user experience across devices. Implemented dynamic content management with Markdown support, utilized Incremental Static Regeneration (ISR) for performance optimization, and configured SEO enhancements to boost search engine visibility. This project showcases expertise in modern web development and a commitment to delivering high-quality web applications.

Job Sprint

Technologies: MongoDB, Express.js, React, Node.js

Job Sprint is a robust job tracking application built using the MERN stack (MongoDB, Express.js, React, Node.js). It enables users to efficiently organize and manage their job applications by providing real-time insights and updates on their job search progress. The application features a user-friendly interface with React, ensuring an intuitive and responsive experience. Back-end services are powered by Node.js and Express.js, while MongoDB handles data

storage and management. Key functionalities include application tracking, progress visualization, and real-time notifications, demonstrating advanced full-stack development skills and a commitment to enhancing job search management.

EDUCATION

University of Waterloo

BASC, Computer Engineering

Sept 2022 – Present

Waterloo, ON
